THE BEST COMPACT MICROWAVE OVEN. Rated the best by the Hammacher Schlemmer Institute, this compact microwave oven has an automatic turntable for more evenly distributing the heating pattern than non-turntable models, and it is the only compact microwave oven with four automatic cooking controls for more precise cooking. "Re-heat," "weight defrost," "weight cook," and "weight frozen cook" settings let you program the food category and weight into the oven's memory which then automatically sets the correct cooking time and power level. It has .7 cubic feet of internal space, 17% more than most compact turntable-type models. A digital cooking timer lets you preset cooking time up to 99 minutes 99 seconds. Small enough (11 x 19½ x 15½ inches) to fit in a galley-type kitchen. Fluorescent tube digital clock, push-button door, oven light, solid state touch controls. Enamel painted steel exterior; epoxy resin coated metal interior. Weight: 37 pounds.

21804X \$269.50 Postpaid and Unconditionally Guaranteed

THE INDOOR/OUTDOOR TENNIS VOLLEY MACHINE. This device automatically retrieves and returns your tennis balls so you can practice year round in rooms as small as 170 square feet. The tubular steel frame and nylon net set up in garage, basement, patio or driveway; at 11 pounds, the frame can be moved by one person without disassembly. Unlike larger models used in health clubs that must be preloaded, this machine operates continuously so you don't have to interrupt your practice. The 65 x 59 x 36-inch net hangs loosely to trap balls, dropping them into the motorized pitching machine where a rotating rubber wheel returns them within seconds; the angle of return can be adjusted to throw balls from five to 30 feet. Plugs into household outlet with 7½-foot cord. Weight (frame and machine): 26 pounds.

27316X \$249.50 Postpaid and Unconditionally Guaranteed

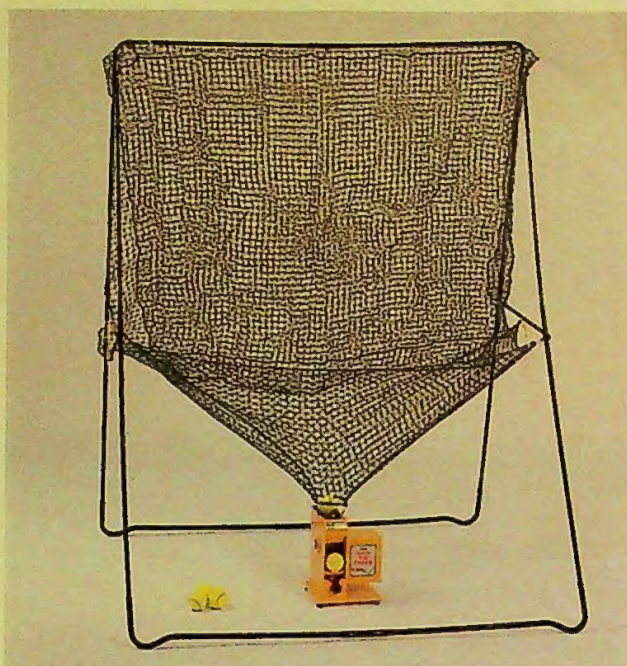

THE WORLD'S BRIGHTEST POWER FAILURE LANTERN. Used by firefighters and police departments, this unique 25,000 candle-power halogen spotlight's circuitry activates the lamp during power failures, giving you a safety light for use near stairways or exits. Stored in its combination wall mount and recharger, it provides eight hours of use on a 10-hour charge (five times longer than other rechargables). The 8-watt halogen bulb gives a whiter, brighter light than ordinary flashlight bulbs and lasts up to 50 hours because the tungsten filament constantly renews itself. Replaceable sealed lead acid battery provides up to 300 charges. Lamp head swivels 360° and the unit can be locked into the recharger. Charges on AC or DC current; 4-foot cord. Unit housing of textured ABS plastic for sure grip and durability. Height: 5 inches. Width: 7 inches. Length: 11½ inches. Weight (with battery): 6½ pounds.

22640X \$174.50 Postpaid and Unconditionally Guaranteed

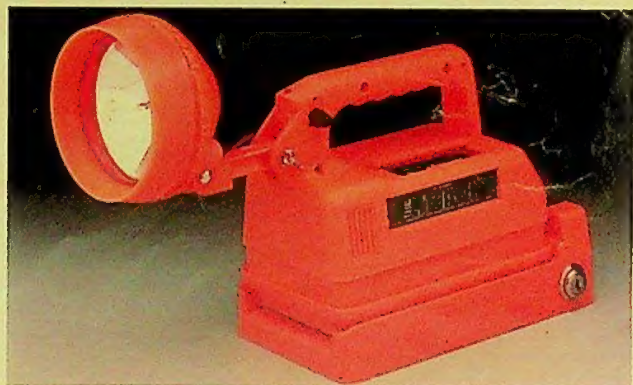

THE SOUTHAMPTON OIL-FILLED RADIATOR.

This portable electric heater has ten columns, more than other models to circulate heat up to 250 square feet (twice as much space as other devices of its kind). The greater surface area radiates heat faster (up to 5118 BTUs), so the 1500-watt heating element doesn't shut down as often as other models. It is the only oil-filled radiator with a 7-day timer that can be programmed to turn on and off automatically at selected intervals (bypass switch lets you turn heat on anytime without disrupting the 7-day program). Automatic tip switch. Adjustable heat settings; 6-foot cord plugs into household outlet; casters for rolling; constructed entirely of steel with baked enamel finish. Height: 23¾ inches. Width: 8¾ inches. Length: 18½ inches.

THE FIRST ELECTRONIC TEA MAKER. This unique device prevents over-boiling and over-steeping because all crucial steps of tea preparation are electronically controlled, letting you enjoy fresh, full-flavored black, oolong or green tea without flatness or bitterness. Water is brought to a boil in the stainless steel boiler and passed immediately into the steeping chamber before it can become de-aerated and give you flat-tasting tea. It remains there for the length of time you preselect, from two to 12 minutes, while tea leaves in the 3 3/4-inch diameter infuser are allowed to circulate for optimal extraction of fragrance and flavor. Continuous adjustment dial lets you select steeping time. Unit prepares up to eight cups of tea. Dishwasher safe. Base of ABS plastic. Plugs into household outlet; 2 1/2-foot cord. Height: 13 1/2 inches. Width: 11 1/2 inches. Length: 6 1/2 inches. Weight: 4.7 pounds.

21084X\$154.50 Postpaid and Unconditionally Guaranteed

THE ONLY ELECTRIC TABLETOP BARBECUE/ ROTISSERIE. This is the only electric table-model barbecue with an electric rotisserie that lets you barbecue year-round; its 8 3/4-inch high hood is deep enough to cook whole turkeys, chickens and large roasts. The 16 1/2 x 26 1/2 x 15-inch unit has a 1740-watt electric heating element that tilts to cook two different foods simultaneously at temperatures from 150° to 600°F, giving you far more precise and controlled cooking than with any charcoal grill. Rotisserie sets in place and removes quickly for grilling. Porcelain-coated cooking grid, aluminum reflector. Housing made of 20-gauge steel. Plugs into household outlet with 7-foot cord. Weight: 23 pounds.

21072X\$169.95
 21078X Without Rotisserie\$129.95

MR MEAT SMOKER[®]

The Original
SMOKER

Le Gourmet

The ultimate in meat smokers

Mr Meat Smoker has created the ultimate outdoor smoker and has rightfully named it Le GOURMET.

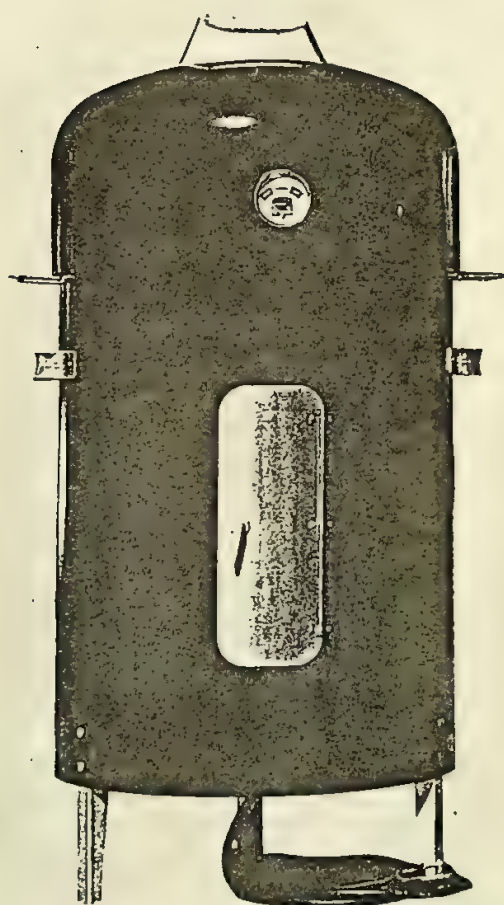

Le GOURMET is made of heavy gauge brushed stainless steel. Being stronger than steel and corrosion resistant, Le GOURMET will last, and last. It is easy to keep clean and comes in charcoal and electric models.

Like all Mr Meat Smokers, Le GOURMET will cook six different ways: smoke, roast, steam, barbecue, shish kabob and fry.

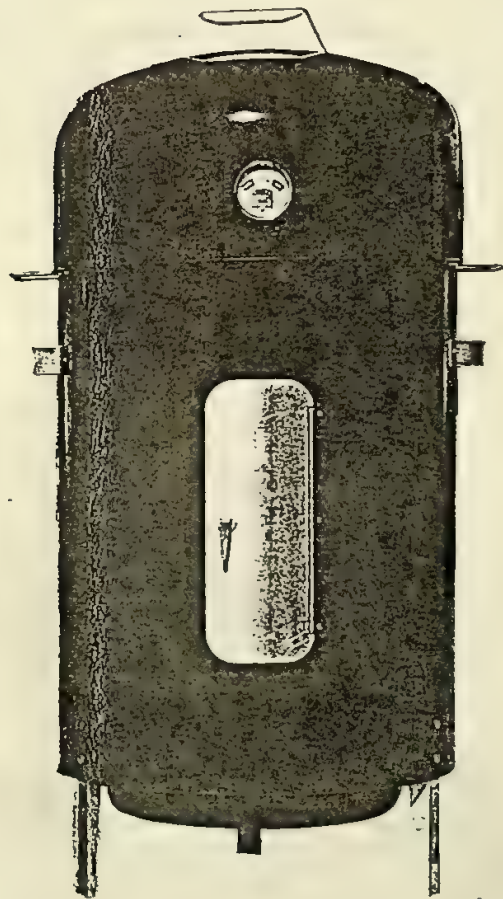

Item #571

MR MEAT SMOKER®

Item #471 E

Item #471

Mr Meat Smoker has created a revolutionary design in outdoor smokers and has named it ESQUIRE.

The ESQUIRE unit is the most versatile on the market by cooking six different ways: smoke, roast, steam, barbecue, shish kabob and fry. The ESQUIRE is available in charcoal and electric models.

The ESQUIRE unit is available in black, pewter and orange porc-e-namel™ with brushed aluminum door, handles and legs.

MR MEAT SMOKER®

De Luxe

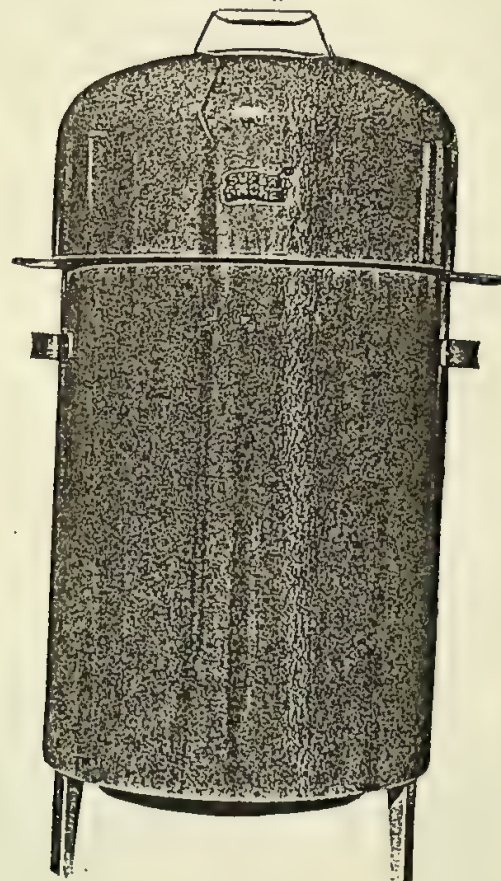

Item #471 D

Mr Meat Smoker DELUXE is basically the same unit as Mr Meat Smoker except it has anodized brass legs, handles and door, and comes in brown only.

Mr Meat Smoker DELUXE is available in charcoal and electric models and can cook six different ways: smoke, roast, steam, barbecue, shish kabob and fry.

SUPER SMOKER

Item #271

Mr Meat Smoker **has** created a double grill smoker which is priced specifically for **promotions**.

SUPER SMOKER **is** available in charcoal and **electric** models and can cook six different ways: smoke, roast, steam, **barbecue**, shish kabob and fry.

SUPER SMOKER **is** available in orange porc-e-name!™ with brushed aluminum handles and legs.

(54) Grill

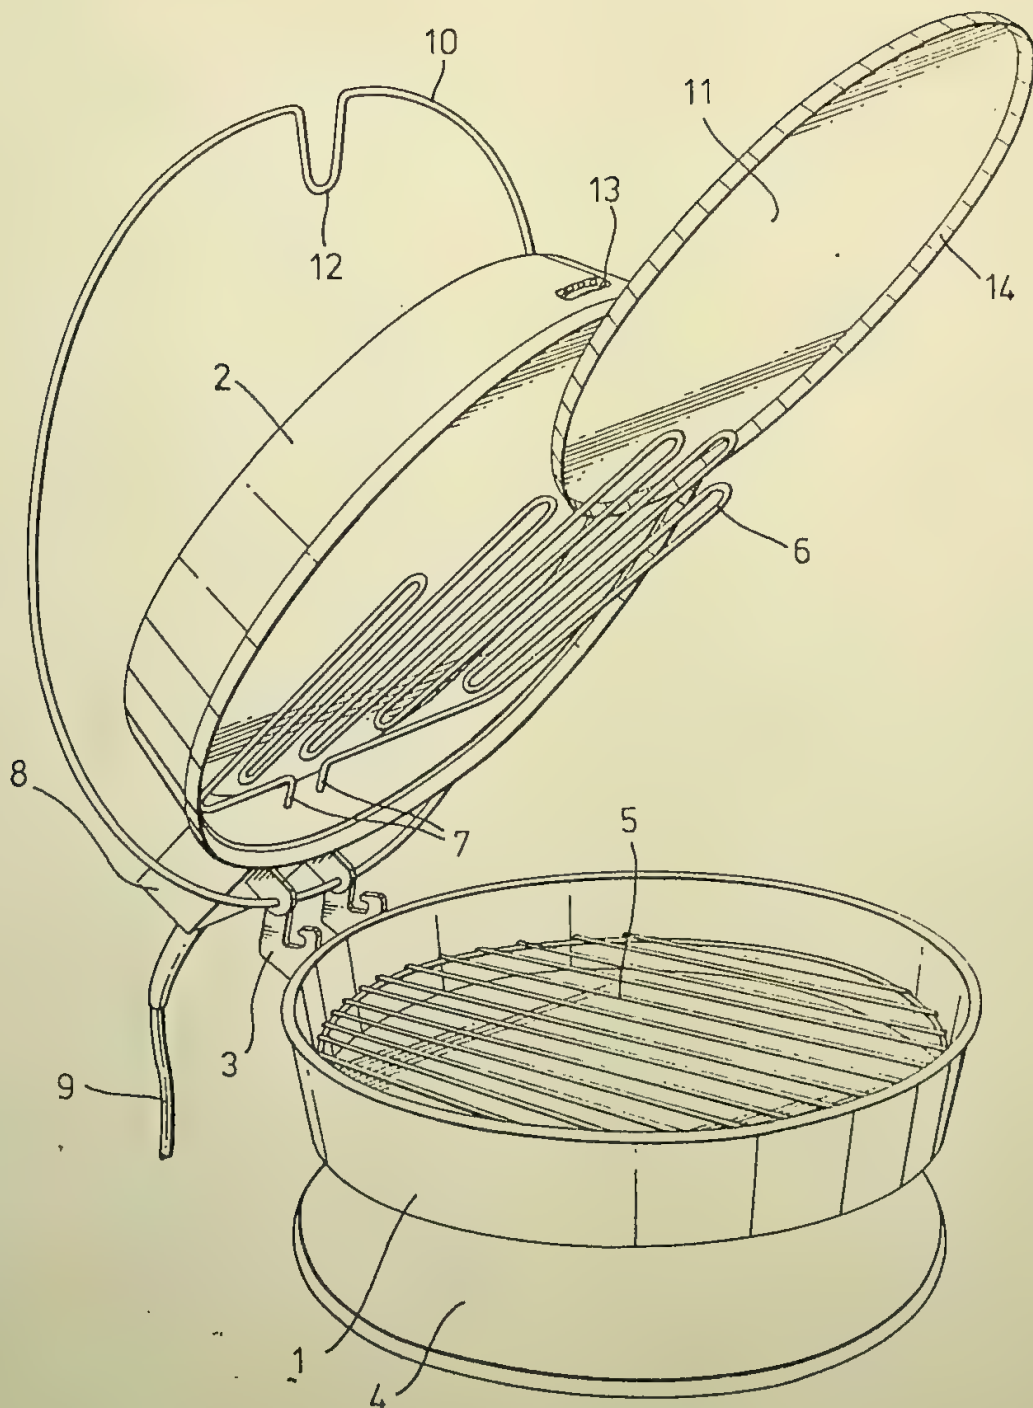

(57) A grill comprises an open top vessel 1, a grid-iron 5 located in the vessel to support the food to be grilled, an upper vessel or lid 2 connected to the first vessel by hinges 3 and being adjustable between a position at which it closes the first vessel 1 and a plurality of positions in which the first vessel is open to some extent. An electric heating resistance 6 is mounted in the upper vessel 2 and is connected to the hinge position for the upper vessel so that in its heating position the resistance 6 can be made substantially parallel to the edges of the upper vessel 2 and enabling it to be pivoted from this position over its hinge position to a partly open position beneath the edges of the upper vessel so that it is then possible to place the reflector plate 14 above the resistance 6 in the upper vessel.

GB 2 025 207 A

2025207

1/1

SPECIFICATION

Grill

5 The present invention is concerned with a grill which comprises a vessel open at the top, a gridiron placed into said vessel, for supporting the foods to be grilled, to which first vessel an upper vessel or lid has been fastened by means of hinges, said upper
10 vessel being approximately of the same size with the first vessel and open at the bottom, and the hinge position being at, or close to, the edges of the vessels so that the vessels can be brought against each other or close to this position and that they can be
15 opened to an open position or allowed to remain in a position that is open to the desired extent.

The invention is in particular characterized in that an electric heating resistance placed in the upper vessel is connected to the above hinge position so
20 that, in its heating position, the resistance can be made substantially parallel with the edges of the upper vessel and that it can be pivoted from this position over its hinge position to a partly open position underneath the edges of the upper vessel so that
25 it is then possible to place a reflector plate above the resistance, which remains above the resistance in the upper vessel when the resistance has been pivoted to its heating position into the upper vessel and which reflector plate can also be easily removed
30 by pivoting the resistance to the opened position.

An embodiment of the invention is illustrated by the attached drawing. It shows the grill in the open position. In the drawing it is possible to see the lower vessel 1, the upper vessel 2, and the connecting
35 hinge position 3, as well as the pedestal 4 of the lower vessel. The gridiron 5 is in the lower vessel at a distance from its bottom as supported by brackets or equivalent (not shown in the drawing), and the gridiron can be lifted away from its position, e.g., for
40 cleaning.

The ends 7 of the heating resistance 6 extend through loose-fitting openings in the rear wall into a piece 8 that includes a contact box, to which the electricity cable 9 is connected by means of a contact
45 plug. The piece 8 is by means of levers, slanting faces gliding against each other, etc. (not shown in the drawing) connected to a ring 10 near the hinge position 3 so that, when the ring is turned in relation to the lid, to the position shown in the drawing, the
50 heating resistance is pivoted down in relation to the lid, as is shown in the drawing.

Then, the reflector plate 11 can be placed in position onto the heating resistance or removed from same. After the heating reflector plate has been
55 placed onto the resistance, the ring 10 is pivoted around the upper vessel. The curve 12 in the ring is then elastically pressed into the recess 13 in the wall of the lid and locks the ring into this position. Correspondingly the heating resistance 6 has been
60 locked into a position in which it is inside the upper vessel in a plane that is substantially parallel to the

By means of an adjustment mechanism related to the lid and keeping it in a position at each particular time open to the desired extent (not shown in the drawing) it is easy to control the heat required by the
70 foods to be grilled. When the lid is at the lowest position, the maximum heating is obtained to the object of heating. A more or less open position of the lid correspondingly reduces the heat radiation. In this way it is possible to control the heating.

75 The electric resistance wire of the heating resistance is insulated in the ordinary way from the surrounding metallic protective pipe, which keeps the resistance in the shape of meander line 6. When the electric current is switched on to the resistance, the
80 resistance glows and radiates heat to the food to be grilled, placed on the gridiron.

When the heating resistance is placed in the lid part, it does usually not come into contact with the food to be grilled, placed on the gridiron underneath.
85 This is why fat cannot drop onto the resistance and produce detrimental smell.

The heat radiation that is directed from the electric resistance upwards and diagonally upwards, i.e. from the food to be grilled away, is reflected from
90 the reflector plate and directed back again towards the food to be grilled. This is intensified by the shiny and bright face of the reflector plate. The lower vessel may also have a bright inside face, e.g. glossy enamel, and reflect back those heat rays that have
95 passed by the food to be grilled downwards and diagonally downwards.

When reflected back, those rays may be directed at the bottom and side faces of the food to be grilled. In order that the faces reflecting heat rays should
100 remain constantly as glossy as possible, the upper and lower vessel may be appropriately enamelled with self-cleansing enamel.

The brightness of the reflector plate may be ensured so that a new reflector plate is used for each
105 grilling. Such disposable reflector plates are made of thin and glossy metal sheet of low cost, such as aluminium foil. After grilling, the reflector plate with its edges 14 that have been bent downwards may also be used for covering the grilled food slices on
110 the plate on the table, which keeps the grilled food warm for a longer time than otherwise.

Of course, it is also possible to wash and clean the reflector plates after use, which is meaningful when the plates are made of a thicker and more expensive
115 material.

Easy removal of the reflector plate after use and easy replacement of a new or cleaned plate are permitted by the grill mechanism in accordance with the invention. When the ring 10 is pivoted, the heating
120 resistance 6 assumes the opened position shown in the drawing, which permits replacement of the reflector plate even when the resistance meander is still hot. When the ring is then pivoted to its locked position, the grill with its reflector plate is again
125 ready for use. When the point 12 is in the recess 13 and the ring is in its thereby locked position and when the upper and lower vessel are locked against

faces.

The grill described above is well suitable for grilling various foods, such as chops, beefsteaks, sausages, broilers, etc. It is also excellently suitable for
5 toasting bread.

The invention is not restricted to the embodiment described above and illustrated in the drawing, but it may show variation in many ways within the scope of the patent claims to be presented below.

10 CLAIMS

1. A grill which comprises a vessel open at the top, a gridiron placed into said vessel, for supporting the foods to be grilled, to which first vessel an upper vessel or lid has been fastened by means of hinges,
15 said upper vessel being approximately of the same size with the first vessel and open at the bottom, and the hinge position being at, or close to, the edges of the vessels so that the vessels can be brought against each other or close to this position and that
20 they can be opened to an open position or allowed to remain in a position that is open to the desired extent, characterized in that an electric heating resistance placed in the upper vessel is connected to the above hinge position so that in its heating position, the resistance can be made substantially parallel with the edges of the upper vessel and that it can
25 be pivoted from this position over its hinge position to a partly open position underneath the edges of the upper vessel so that it is then possible to place a
30 reflector plate above the resistance, which reflector plate remains above the resistance in the upper vessel when the resistance has been pivoted to its heating position into the upper vessel and which reflector plate can also be easily removed by pivoting the
35 resistance to the opened position.

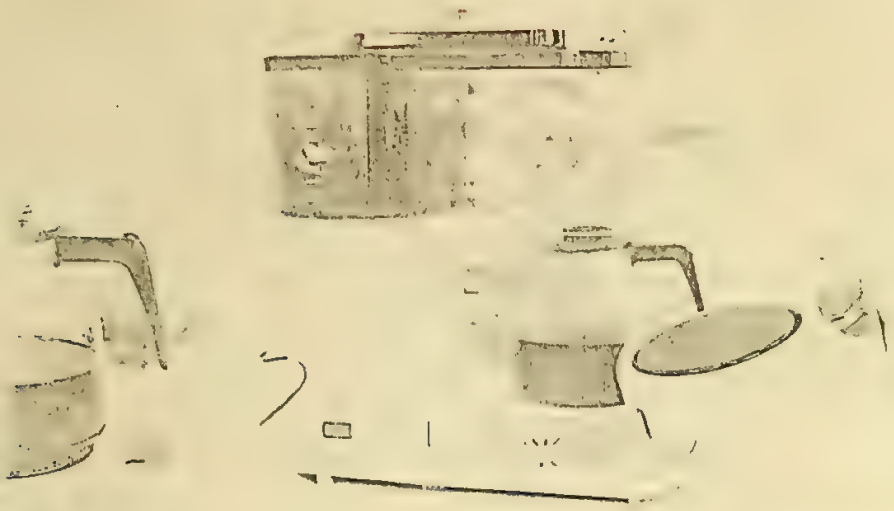

2. A grill as claimed in claim 1, characterized in that the reflector plate is made of glossy sheet, e.g. aluminium foil, and that its edges are bent slightly downwards so that these bent positions keep the
40 rest of the foil at a distance from the resistance when the foil is placed in position above the resistance.

3. A grill as claimed in claims 1 to 2, characterized in that the pivoting of the resistance to the opened position for removal or replacement of the
45 reflector plate takes place by pivoting an annular piece, placed outside the upper vessel at a distance from said vessel, around said hinge position.

4. A grill as claimed in claim 1 to 3, characterized in that the annular piece and the heating resistance
50 can be locked into such a position in relation to the lid in which they are substantially in a plane parallel to the edges of the lid and that the locking is produced by a curve, point, etc. in the annular piece, which curve etc. is elastically pressed into a corresponding
55 ponding recess in the lid.

5. A grill substantially as herein described with reference to the accompanying drawing.

Jiffy Loses Picture Hanger Patent Appeal

By KATHY DOUGHERTY

PHILADELPHIA. — In a two-to-one decision, the U.S. Court of Appeals for the Third Circuit, here, upheld a lower court ruling which invalidated a patent on a nail-less adhesive picture hanger by Joseph M. Margulis, president of Jiffy Enterprises, Inc., housewares manufacturer, 150 North 13th Street.

The patent, No. 2,809,001, was the focus of two suits consolidated and tried as one before Federal Judge Paul Leahy, here. One suit was brought against Jiffy by E. H. Tate Co., Boston housewares manufacturer, which attacked the validity of the patent. The other suit was by Jiffy against Tate and Sears, Roebuck & Co., a Tate customer charged with patent infringement.

Judge Leahy ruled last July 23 that the Margulis patent was invalid and "only a little different from another Margulis patent, No. 2,647,711 and that therefore no infringement action was proper."

According to the court, the '001 patent, issued Oct. 8, 1957, was "anticipated" by '711 and 19 earlier patents relating to picture hangers.

In appealing this decision, Jiffy

argued before Judges Gerald McLaughlin, Harry E. Kalodner and J. Cullen Gaihey that the lower court "failed to grasp the significance" of the difference between '711, where the hook swivels around the head of a separate eyelet inserted through a hole in the metal support bar, and the later model, featuring an integral flange eyelet and which allegedly is lighter, thinner and more mobile, features which merit a separate patent, according to Jiffy.

This was denied by the Court of Appeals, which found the difference "not sufficient to confer patentability upon the product."

Dissenting, Judge Kalodner found the changes in the latter patent to be the result of "inventive faculty."

"The record here discloses ample basis for holding '001 valid because of the economy of production which it made possible with resulting decrease in cost to the ultimate consumer," Judge Kalodner said.

Master Mfg. New Car Washer

Master Mfg., 9200 Inman Ave., Cleveland, is offering a 5-ounce Master car washer with giant removable foam head to cover a 38-square-inch area, and styrene handle. Retail price of the item is \$1.98. Replacement heads priced at 98 cents each.

NEW GRILL CONCEPT —

Safari grill from Swaniebraai, Inc., 910 17th Street, Washington, D. C. uses crumpled newspaper for fuel instead of charcoal or briquettes, working on a controlled combustion concept. Retail for the deluxe model, \$10.95; for the standard model, \$8.95. Currently on sale in selected markets, national distribution is planned.

Torpey Named Regina Ad Head

RAHWAY, N. J. — John J. Torpey has been named advertising manager of Regina Corp. here, succeeding Paul Currier, who has resigned.

Mr. Torpey had been advertising and sales promotion manager for the U. S. Printing and Lithographic division of Diamond National Corp., and prior to that had held the same position with Igoo Bros., Inc.

Rosenbaum's Closing: 43 Years in Wilmington

WILMINGTON, Del. — Rosenbaum's, housewares and related merchandise retailer for 43 years, will go out of business the end of March.

Rising business costs and declining sales were cited by Daniel Rosenbaum, president, as reasons for the move.

Melamine Council To Reveal Ad Plans For '62, Wednesday

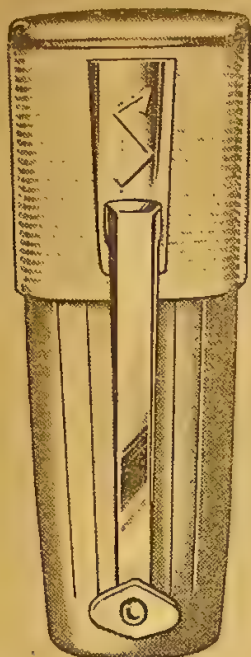

NEW YORK.—Melamine dinnerware molders, attending the sixth annual meeting of the Melamine Council at the Summit Hotel Wednesday and Thursday will hear the group's advertising, promotion-

al and educational plans for 1962. In addition, the group will elect a new chairman and steering committee.

Wednesday business sessions will be kicked off at 9:30 a.m. by Bill Stopford, chairman of the council for the past four years and general manager of Boonton Molding Co., Boonton, N. J.

The morning sessions will feature a review of the Council's publicity and institutional advertising programs, along with plans for this year. The afternoon session will begin with a presentation of a study undertaken for the Melamine Council by Nathan Katz Associates on the profitability of selling melamine dinnerware. It will wind up with elections of a new chairman and steering committee.

Thursday sessions will include presentation of a new color-sound training film, a run-down of planned department store promotions, a new slide film and a promotional booklet called Melamine for Moderns.

SUPER SIX — Associated Food Stores, 265-member supermarket cooperative in the metropolitan New York area, will begin its first promotion of electric housewares this week, offering discount prices on a Proctor toaster, Westinghouse iron, Dormeyer portable mixer, GE can opener, West Bend nine-cup and 30-cup percolators. Shown, a display in an Associated store in Freeport, N. Y., featuring the six items near the checkout area.

1960 Plastic Ware Shipments Told

WASHINGTON. — Shipments of plastic dinnerware, tableware, and kitchenware during 1960 totaled \$98,246,000, the Commerce Department reported in the first of a new series of annual reports on plastic products.

Shipments of plastic components, housings, accessories and parts of selected household and commercial appliances in 1960 totaled \$6,848,000 for air conditioners; \$40,892,000 for refrigerators and freezers; \$28,244,000 for other major appliances, and \$18,415,000 for electric housewares.

BIG BOY MFG. CO., BURBANK, CALIF.

Associated to Begin First Electrics Drive

Continued from Page One
although some stores received deliveries last week and have already begun selling the items.

ALL ITEMS were bought on a direct basis with the exception of the GE can opener and the Westinghouse iron, which are being handled through distributors, Mr. Glickstein said.

In addition to its initial order, Associated has options to buy more units. The chain expects to sell "far in excess" of the minimum estimate, Mr. Glickstein said.

Display material, such as window and point-of-sale posters, are being made available to participating stores, Mr. Glickstein said. Each store will develop its own display to suit the physical characteristics of the store.

MOST STORES will feature the six items over refrigerator cases. Others plan to feature them on end gondolas or in the checkout area.

Mr. Glickstein said some of the stores may continue selling the items beyond the month-long promotion.

Associated's first housewares promotion, which started Dec. 6, as previously noted, featured Hamilton-Cosco's Stylare bridge table and chairs at \$5.49 for the table and \$3.99 for the chair. This promotion, too, was on a straight cash basis, with no tapes or tie-ins.

OVER 10 CARLOADS of the merchandise, each containing 1,200

tables or package of two chairs, were sold during the initial promotion, Mr. Glickstein said.

Associated's discount value promotions, Mr. Glickstein said, are designed to stimulate over-all sales and to offset inroads made by local discount houses.

Mr. Glickstein said, however, that Associated does not really expect to compete with discount houses.

WHAT ASSOCIATED CAN DO, Mr. Glickstein said, is "to offer the customer a recognizable brand name, with an obvious value, and discount it practically at her doorstep."

During Associated's first housewares promotions, a number of the member stores did not participate because of space problems, Mr. Glickstein said. All are expected to take part in this second promotion.

Before the initial promotion, Associated had not made any serious attempt to promote or carry anything more than a few basic housewares staples. A few of the member stores had, in the past, carried several small appliances, setting up their individual promotions with tapes or stamps.

CHICAGO.—Dormeyer division of Weber, Inc., officials could not be reached for comment on the use of its mixer in an Associated Food Stores promotion, and said to be purchased by Associated on a direct basis.

600 EXHIBITORS FOR APRIL SHOW

CHICAGO.—A record 600 manufacturers will be represented at the 29th National Premium Buyers Exposition, according to Hall-Erickson, Inc., managing the show scheduled for April 9-12 at McCormick Place.

More than 50,000 items are expected to be on display with 79 first-time exhibitors taking part in the sales incentive show.

Cyanamid Net, Sales Up

NEW YORK.—Net earnings and sales of American Cyanamid Co. increased 5.4 and 4.4 per cent respectively in the year ended Dec. 31.

Net earnings totaled \$49,353,505, equal to \$2.31 a common share, versus the \$46,820,953, or \$2.20 a share.

Sales were \$603,958,772, against \$578,389,585.

Files Bankruptcy Plea

NEW HAVEN.—A voluntary petition in bankruptcy has been filed in Federal Court here by Alcos, Inc., dealer in aluminum products, 2540 Summer Street, Stamford, Conn.

Liabilities total \$34,716, including wages, \$633; U. S. taxes, \$839; unsecured claims, \$33,243. Assets of \$3,525 include machinery, fixtures and tools, \$150; accounts receivable, \$2,708; property in trust, \$310.

NEW HAVEN, CONNECTICUT

Bids Glamorene End Ad Claim

WASHINGTON.—The Federal Trade Commission ordered Glamorene, Inc., Clifton, N. J., to stop representing that its liquid shampoo will clean rugs by merely spreading it over them.

At the same time, the Commission dismissed charges, for failure of proof, that the firm falsely claimed its shampoo and applicator are as effective as professional rug cleaning.

FTC's original complaint against the firm was issued Aug. 24, 1960.

Ad Agency Named

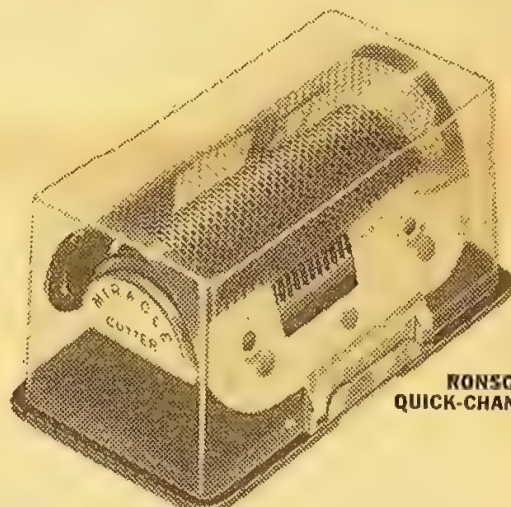

CHICAGO.—Republic Molding Corp. has named Roche, Rickard & Cleary, Inc., as its advertising agency. Republic reports it plans extensive use of national magazines in 1962 as well as working out a specialized newspaper campaign for selected markets.

SELLING IS A DAILY JOB

Why Ronson Shavers shave forever (and keep making money for you)

RONSON QUICK-CHANGE KIT

Ronson's Quick-Change Kits keep Ronson CFL Mark II and CFL 300 "Big Daddy" shavers sharp for life—insure you repeat business. Each kit contains a replaceable shaving screen and multi-blade Miracle cutter that can be snapped in at home. Ronson was the first to explode the myth that shavers are "self-sharpening"; first to advertise the need to keep shavers sharp. Ronson alone has these advantages:

1. Lowest price. Mark II kit is only \$3.00. CFL 300 kit is only \$3.75 (suggested retail prices).
2. Easiest to use. It's a snap to replace; 10 seconds.
3. Consumer support. Ronson sells Quick-Change Kits again and again in leading consumer magazines.

Start profiting now. Write: Appliance Sales Department, 1 Ronson Rd., Woodbridge, N.J.

Living
Indoors!

For the most lip-smacking eating you've ever known, charcoal broil steaks, fish, fowl, etc., on CHARCOOK! Proved over 90% smokeless. Self-sterilizing. Made of nickel-plated steel with 10½" grill. Ash and drip pan eliminates dirt and grease. Requires no kindling—lights over gas or electric stove in seconds, then burns for hours without attention. Also ideal for gardens, picnics. Large bag of finest hickory and hardwood charcoal included free. Price, only \$4.95 complete, plus 25¢ postage. Or, sent C.O.D. \$4.95 plus postage. Money back if not delighted. Order now!
